

SOLICO NOW OFFERS SEALED BUSS BARS

The Best Protection for Your Electrical System

Solico's compact innovative USA manufactured maintenance free plug and play bus bar eliminates corrosion, reduces installation labor costs by at least 50% and the connection stays as secure as the date installed. The conductive copper is completely over molded and encapsulates the conductive plate leaving the only exposed metal the stainless-steel studs for the ground connection and is capable of weathering harsh environments and operating conditions. In addition to doing away with potential wiring errors Solico's bus bar meets or exceeds Coast Guard, ABYC and NMMA standards and meets SAEJ1171 Ignition protection requirements at 100% continuous rating.

Standard bus bar with corrosion

Solico Sealed Buss Bar

- Single connector rated 150 amps at 48VDC
- Double connector rated 300 amps at 48VDC
- IP67 dust tight and water resistant
- Vibration spec. is 20 G's at 10-2000 Hz
